

## Uninstalling the FTDI USB Serial Drivers and Port from your Mac Computer OSX 10.-10.4

First, on your desktop open your macintosh Hard disk  
find your system folder (the one with the X Icon on it) double click on it to open it  
next find your library folder (the one with the books Icon on it) and double click on it to open it  
next find your extensions folder double click on it to open it  
scroll down and locate a document called FTDIUSBSerialDriver.kext  
grab and move that document to the trash, and close up all your windows.

Next, on your desktop open your macintosh Hard disk  
find your library folder (the one with the books Icon on it) double click on it to open it  
next scroll down and locate a package that is called FTDIUSBSerialDriver.pkg  
grab and move that package to the trash, and close up all your windows.

Finally locate the blue apple at the top left corner of your screen  
and click once on the apple with your mouse to reveal a menu  
move down the list to system preferences and click once it  
the system preferences will open up in another window.

under system preferences, locate the section titled Internet and Network it is clearly marked, now locate and click on the network icon, now you will see a new window with 2 buttons at the top of that page  
**(location and show)** locate the word **(show)**, next to it you will see a button called **network status**, hold down on that button and change it from **network status** to **network port configurations** a new list will appear, find the **port configuration** that says **usbserial-xxxx** highlight it and click the delete button, Now close up all your windows.  
you have just successfully removed the serial driver software and serial port from your computer.  
remember to delete your trash.

## Uninstalling the FTDI USB Serial Drivers and Port from your Mac Computer OSX 10.5
